Lecture 11: Media Tags, Modern HTML & iframes.

→ <img> tag : It is used to embed an image in an HTML Page. It has two attributes i,e, src and alt.

• src : it specifies the path of the image
• alt : it specifies the alternate text for the image, if image can't displayed.

→ <audio> tag : It is used to embed sound content in a document, such as music or other audio streams. For visibility we must use controls.

→ <video> tag : It is used to embed video content in a document, such as a movie clip or other video streams. For visibility we must use controls.

→ <iframe> tag : It is a inline frame. It is used to embed another document within the current HTML document.

→ What is loading = "lazy" in <img> tag ?

The loading attribute specifies wheather a browser should load an image immediately or to defer loading off-screen images until for example the user scrolls near them. It contain two values, i,e, eager or lazy.

→ eager : default (loads an image immediately)
→ lazy : defer loading of images until some conditions are met.
