Lecture 19: Mastering CSS Float, Clear & Overflow

→ Float : The float property is used for positioning and formatting content. For example an image float left to the text in a container.
The float property have four values, left, right, none & inherit.
In simple words float property is used to wrap text around images.

→ Clear : The clear property specifies what should happen with the element that is next to a floating element.
The clear property has five values like none, left, right, both & inherit.

→ Overflow : The overflow property specifies whether to clip the content or to add scroll bars when the content of an element is too big to fit in the specified area. This property has four values :

* visible : It is default value which means overflow is not clipped.

* hidden : The overflow is clipped, and the rest of the content will invisible.

* scroll : The overflow is clipped and a scroll bar is added to see content.

* auto : Similar to scroll, but it adds scrollbars only when necessary.
