Lecture 24: Transition Effects in CSS

The CSS transitions allows us to change property value smoothly.

→ transition-property : This property is specified as one or more single-property transition, separated by commas. (Ex: all and none)

→ transition-delay : This property specifies a delay for the transition effect.

→ transition-duration : This property specifies how long a transition effect run.

→ transition-timing-function : This property specifies the curve of transition-

→ Shorthand-property :

```
div {
    transition: width 5s linear 1s ?
}
```

transition property — width
transition duration — 5s
transition-timing-function — linear
transition-delay — 1s
